1 Appendix Contents

In this appendix we provide a brief description on the content of our online repository that contains the data used in our paper[1].

```
/
├── Literature_Review_Protocol.pdf
├── Literature_review_data.xlsx
├── External_Validation.pdf
└── Internal_Validation.xlsx
```

The followings describe the content of our repository:

- The protocol used in our literature review detailing our research process and describing the extracted data from literature (Literature_Review_Protocol.pdf).

- A list of SEAMS publications between 2016-2020, which was used for the literature review (Literature_review_data.xlsx –> sheet "List of SEAMS publications").

- The extracted data from our literature review (Literature_review_data.xlsx –> sheet "Included papers extracted data").

- The full list of matching the specification patterns into the extracted SE properties in SAS

  (Literature_review_data.xlsx –> sheet "SE to specification patterns"). This information can also be found under "Category (According to ps paterns)" column in "Included papers extracted data" sheet.

- The validation document that was sent to external researchers to validate our mapping and findings

  (External_Validation.pdf).

- The validation results of the categorization of SE properties into specification patterns that was conducted by three independent authors (Internal_Validation.xlsx).
